

## New and Improved Insect Screen

An industry leader in screen technology and product innovation, ADFORS is once again ahead of the curve in setting global trends in the insect screen market. ADFORS is excited to offer newly upgraded screening products with the following green improvements:

### GREENGUARD GOLD Certification

ADFORS achieved GREENGUARD GOLD certification on our full line of fiberglass and polyester screen. GREENGUARD certification helps buyers to identify products and materials with low chemical emissions. GREENGUARD GOLD certification offers stricter criteria, considers safety factors to account for sensitive individuals and ensures that a product is acceptable for use in environments such as schools and healthcare facilities.

Ortho-Phthalate free 

### Ortho-Phthalate Free

ADFORS is once again leading the industry by offering a full line of fiberglass and polyester insect screening that is Ortho-Phthalate Free. We are ahead of the worldwide regulations by removing these substances from our coating. In addition, our products are also Nonylphenol Free.

### Eliminated substances listed in Prop 65 (DINP)

ADFORS has taken the proactive approach and completely eliminated DINP from our screen. While our screen was previously under the safe harbor limit for DINP, we have removed this substance completely from our insect screen product line.

The ortho-phthalate free and DINP transition is a rolling change which has already begun. With these improvements, ADFORS screen maintains the same great performance quality it's always provided. Both the aesthetics and processability of our screen remain unchanged. In addition, ADFORS products continue to meet all ASTM standards including flame resistance.
